# Checklist

## 1. Problem formulation [0-4 pts]:

Criteria	Point
<b>is the problem clearly stated [1 pt]</b> Comments: Yes. Will Golden State Warriors win the championship?	1
<b>what is the point of creating model, are potential use cases defined [1 pt]</b> Comments: Yes, the point is to check possibility of winning the championship by GSW	1
<b>where do data comes from, what does it contain [1 pt]</b> Comments: There is one dataset and it contains career stats of Steph Curry	1
<b>is preprocessing step clearly described [1 pt]</b> Comments: Yes, but there is lack of description	0,5

## 2. Model [0-4 pts]

Criteria	Point
<p><b>are two different models specified [1 pt]</b></p> <p>Comments: Yes, all parameters are described for both models</p>	1
<p><b>are difference between two models explained [1 pt]</b></p> <p>Comments: Yes, there is a clearly explanation about two models</p>	1
<p><b>is the difference in the models justified (e.g. does adding additional parameters make sense? ) [1 pt]</b></p> <p>Comments: Yes, clearly</p>	1
<p><b>are models sufficiently described (what are formulas, what are parameters, what data are required ) [1 pt]</b></p> <p>Comments: Yes, the models were sufficiently described.</p>	1

3. Priors [0-4 pts]

Criteria	Point
<p><b>Is it explained why particular priors for parameters were selected [1 pt]</b></p> <p>Comments: Yes</p>	1
<p><b>Have prior predictive checks been done for parameters (are parameters simulated from priors make sense) [1 pt]</b></p> <p>Comments: Yes, 550 out of 1000 games have been won by Steph Curry, and It is 55%</p>	1
<p><b>Have prior predictive checks been done for measurements (are measurements simulated from priors make sense) [1 pt]</b></p> <p>Comments: Yes</p>	1
<p><b>How prior parameters were selected [1 pt]</b></p> <p>Comments: Based on previous career</p>	1

4. Posterior analysis (model 1) [0-4 pts]

Criteria	Point
<p><b>Were there any issues with the sampling? if there were what kind of ideas for mitigation were used [1 pt]</b></p> <p>Comments: No problem with sampling</p>	1
<p><b>are the samples from posterior predictive distribution analyzed [1 pt]</b></p> <p>Comments: Yes, histogram shows all the data</p>	1
<p><b>are the data consistent with posterior predictive samples and is it sufficiently commented (if they are not then is the justification provided)</b></p> <p>Comments: Both, commented and also consistent</p>	1
<p><b>have parameter marginal distributions been analyzed (histograms of individual parameters plus summaries, are they diffuse or concentrated, what can we say about values) [1 pt]</b></p> <p>Comments: Yes, histograms were provided and analyzed. Mean value of y on 0.69</p> <p>Lack of comparison</p>	0,5

5. Posterior analysis (model 2) [0-4 pts]

Criteria	Point
<p><b>Were there any issues with the sampling? if there were what kind of ideas for mitigation were used [1 pt]</b></p> <p>Comments: No issues with sampling</p>	1
<p><b>are the samples from posterior predictive distribution analyzed [1 pt]</b></p> <p>Comments: Yes they are shown in histograms, and there is also descriptive analysis</p>	1
<p><b>are the data consistent with posterior predictive samples and is it sufficiently commented (if they are not then is the justification provided)</b></p> <p>Comments: Consistent and also sufficiently commented</p>	1
<p><b>have parameter marginal distributions been analyzed (histograms of individual parameters plus summaries, are they diffuse or concentrated, what can we say about values) [1 pt]</b></p> <p>Comments: Yes, there are histograms and also about values “ (theta) shifted to the right has the mean value of 0.65”</p> <p>“Mean value of y is 0.8 therefore, we can say that the chance of Stephen Curry winning this championship is 80%”</p> <p>Lack of description of all histograms.</p>	0,5

6. Model comparison [0-4 pts]

Criteria	Point
<p><b>Have models been compared using information criteria [1 pt]</b></p> <p>Comments: Yes</p>	1
<p><b>Have result for WAIC been discussed (is there a clear winner, or is there an overlap, were there any warnings) [1 pt]</b></p> <p>Comments: No overlap, no warnings. There is clear winner as model 2</p>	1
<p><b>Have result for PSIS-LOO been discussed (is there a clear winner, or is there an overlap, were there any warnings) [1 pt]</b></p> <p>Comments: No overlap, no warnings. There is clear winner as model 2</p>	1
<p><b>Whas the model comparison discussed? Do authors agree with information criteria? Why in your opinion one model better than another [1 pt]</b></p> <p>Comments: Yes, For me the second model is better, because two additional parameters allows us to increase possibilities of winning the championship by Steph Curry.</p>	1

## Final Grade

Sections	Points
Section 1	3,5
Section 2	4
Section 3	4
Section 4	3,5
Section 5	3,5
Section 6	4
<b>Total</b>	22,5
